

Digital music for audiophiles - Peachtree Audio bring convergence to audio with its range of products that make the most of digital music files – no matter how it is stored or accessed.

September 2010 - London - Computers Unlimited, the UK's largest distributor of digital home products, is delighted to announce the UK launch of Peachtree Audio, the American audio company whose products link the divide between audiophiles and digital music.

The Nova has a storage port on its rear panel to fit a Sonos wireless zone player (ZXP90 shown).

With its ever-growing product line-up and extensive research and development, Peachtree Audio is quickly becoming the company that understands that **digital music can be reproduced with the quality expected by the audiophile** yet with the style and ease demanded by the consumer. Whether your music is stored on a PC or Mac, or accessed from any number of digital music storage systems (**Sonos®**, **Squeezebox®**, **Apple TV®**, **i-Tunes®** etc.), Peachtree Audio products are designed to reproduce the music the way it was intended.

As Jim Spainhour, Managing Director of Peachtree Audio says “We’re a dedicated group of audiophiles who believe that **consumer-friendly industrial design** is just as important as the highest level of performance; **and good value is most important of all**. Our products must also be future-proof, so we have added features to address the **vast array of computer audio products on the market.**”

The Peachtree Audio line-up currently consists of three products – Nova, Decco² and iDecco.

Nova – 80 Watts per channel integrated amplifier with on-board DAC

The Peachtree Nova

Four products in one, the Nova is an integrated amplifier that features an **80 Watts per channel solid-state amplifier**, a ‘**Class-A**’ valve, 3 analogue, 5 digital (2 x coax, 2 x optical and 1 x USB) input pre-amplifier (inc. pre-amplifier out and line out), a **high-end headphone pre-amplifier** stage and an on-board DAC. Utilising the **ESS 9006 Sabre DAC with patented jitter reduction circuit**, the quality of the Nova DAC would not be out of place on a product significantly more expensive.

/cont

The Nova with (optional) Sonos ZP90 Zone player

Home theatre by-pass (analogue input 3) allows for connection into an AV system and a rear-mounted **Digital Filter Slope switch** allows the user a degree of sound tuning when listening through the DAC (hard or soft).

For those consumers using **Sonos® multiroom wireless music systems**, the Nova also features a slot in the back where a **ZP90 zone player can be housed**, reducing the appearance of multiple boxes and, when connected via the digital input, allowing for **high-quality audiophile performance in any room**.

Decco² – 40 Watts per channel integrated amplifier with on-board DAC

The Peachtree Decco²

The second generation for the Decco series, the Decco² is the smaller brother of the Nova and features a **40 Watts per channel integrated amplifier** using the same **ESS 9006 Sabre DAC** as its bigger brother. Again featuring a ‘Class A’ valve pre-amplifier (this time with 2 x analogue and 3 x digital (1 x coax, 1 x optical and 1 x USB) inputs, pre-amplifier out and line out) and **high-end headphone pre-amplifier**, the Decco² again features the same **slot in the back for a Sonos® ZP90 zone player**.

iDecco – The world’s first valve hybrid 40 Watts per channel integrated amplifier with ‘Pure Digital’ iPod dock and on-board DAC

The Peachtree iDecco

Based on the same specification as the Decco² (40 Watts per channel power amplifier, ‘Class A’ valve preamplifier (1 x analogue input, pre-amplifier output, line-level output) and high-end headphone stage), the iDecco features a **top-loading ‘Pure Digital’ iPod dock** for taking the signals from an iPod in their digital form before processing within the same on-board DAC as its other family members. This is **by far the best way to get the music off an iPod** and, as long as the music has been uploaded onto the iPod in its highest resolution, **allows for near CD quality reproduction**. An additional 3 digital inputs (1 x coax, 1 x optical and 1 x USB) complete the input line-up.

Peachtree Audio products will be available in the UK via the Computers Unlimited dealer network from October 2010 with the following SRP’s and finishes:

- Nova** - £1099.99 (Piano Black, Rosewood or Cherry)
- Decco2** - £849.99 (Piano Black)
- iDecco** - £999.99 (Piano Black)

Indepth product information, images and press samples are available on request.

Additional products to the range will be available shortly.

Peachtree Audio products are distributed in the UK by the Digital Home division of Computers Unlimited, the UK’s largest distributor of CE products:

**Computers Unlimited
The Technology Park
Colindeep Lane
London
NW9 6BX**
