

TEAC UK announces the launch of the NS-X1 Network Music System with Airplay and DLNA connectivity

January 9th 2012 – Watford – TEAC UK is delighted to announce the NS-X1 Network Music System - a beautifully crafted slim silver/black audio system that incorporates Apple AirPlay, DNLA networking, FM and Internet radio as well as a dock for iPhone® or iPod®.

The ideal package for anyone wanting to gain the very best from their digital music sources, the NS-X1 is available now in-store or online exclusively from Currys and PC World currently selling for £229.

The NS-X1 Network Music System

Regardless of which room of the house the user may be in, **wireless access of digital music libraries** stored on a NAS Drive, PC / MAC®, iPod®, iPhone® or iPad® is simple and easy. As the NS-X1 uses **DNLA technology** to integrate into a home network, **inclusion of Apple AirPlay** allows users to select and stream music directly from their iOS devices without the need to leave their seats.

Featuring 10W+10W power output driving two 2.5-inch speakers with Bass-reflex technology, the NS-X1 delivers a **significantly deeper bass than expected from a unit of this size**. A six preset digital EQ allows for further refinement where necessary.

All significant digital audio formats are supported (MP3, WMA, WAV, AAC, OGG Flac, Mpeg1-Layer 1/2/3 and LPCM) as well as a **30 pre-set FM tuner** and access to **internet radio via Vtuner** - pre-installed software allowing users to easily navigate the world wide web to set up and personalise their favourites list from almost eighteen thousand internet radio stations.

Standard operation and functions of the NS-X1 can be addressed using the **supplied intuitive IR-remote control** including iPhone®/iPod® basic controls when docked (docked devices will also be charged). Playback of the Apple® music libraries are controlled directly via the iPhone®/iPad® while utilising AirPlay.

The NS-X1 is only 5.5 cm deep and can be either sat on a desktop or hung on a wall.
